

Nicholas Davis

Senior Software Engineer

Arlington, VA, USA - nicholadavis918@gmail.com

SUMMARY

A highly skilled Software Engineer with **over 8 years of experience in full-stack development**. Expertise in **Java, React, C#, and Python**, with a solid background in **cloud platforms, CI/CD processes**, and modern web technologies. Proven track record of delivering **high-quality software** in agile environments. **Adept at designing scalable, performant systems** and collaborating in cross-functional teams to drive product success.

SKILLS

- **Java, Spring Boot, Spring MVC, Hibernate, Apache Kafka, C#, ASP.NET Core, Entity Framework, LINQ, Python, Flask, FastAPI**
- **React, Redux, Tanstack Router, Angular, Vue, TypeScript, JavaScript, Tailwind CSS, Bootstrap**
- **AWS (EC2, Elastic Beanstalk, RDS, Lambda, Amplify, CloudWatch), Azure, Docker, Kubernetes, Jenkins, Circle CI, GitHub Actions**
- **MySQL, PostgreSQL, MongoDB, SQL Server, Redis**
- **TensorFlow, PyTorch, Azure Machine Learning**
- **JUnit, MSTest, Swagger, CI/CD pipelines**
- **Collaboration, Problem solving, Customer obsession**

EXPERIENCE

Fusemachines - Remote

2022.3 – Present

Software Engineer

- Spearheaded the development of a Java-based e-commerce platform using Spring Boot for REST API development, integrating Hibernate for ORM, and Apache Kafka for messaging, improving transaction processing times by 40%.
- Led the migration of legacy Java systems to cloud-native architectures, utilizing AWS EC2, Elastic Beanstalk, and RDS for backend services, significantly reducing infrastructure costs and deployment time.
- Designed and implemented RESTful Java APIs with Spring Security for authentication and authorization, improving API security and compliance with enterprise standards.
- Launched an educational platform using React, React hooks, JavaScript, TypeScript, Node.js, Express, Prisma, Firebase, Google SSO and AWS within a small team.
- Integrated Docker and Kubernetes for containerization and orchestration, streamlining deployment pipelines and enabling CI/CD with Jenkins, reducing deployment errors and increasing delivery speed by 30%.
- Designed backend business logic using C# and ASP.NET Core, interacting with Microsoft SQL Server and ensuring transaction integrity through Entity Framework and LINQ.
- Developed front-end components using React, implementing Redux for state management and React Router for seamless navigation, improving user experience.
- Worked with TypeScript, JavaScript, and CSS (Tailwind, MUI, Bootstrap) to enhance UI/UX, focusing on performance optimizations like code splitting and lazy loading, reducing load time by 25%.
- Integrated third-party payment gateways using Java and Spring Boot, ensuring secure transactions and PCI compliance.

- Worked on building a system that detects patients' symptoms and generates notes using AI (React, TypeScript, Websocket, tRPC, Redis, BullMQ, AWS, OpenAI)
- Collaborated on architectural decisions, recommending the use of Spring Cloud for microservices and AWS Lambda for serverless functions, improving scalability and fault tolerance.
- Built and optimized C#-based microservices using ASP.NET Core and Entity Framework, enabling efficient data handling and integration with Azure SQL Database.
- Migrated a Vue2 application to use Vue3, TypeScript and Quasar and fixed issues in Python/Django based server
- Improved state management within Angular applications by incorporating NgRx, leading to better scalability and more maintainable code when dealing with complex state transitions.

Provectus - Remote

2020.9 – 2022.2

Software Engineer

- Developed backend services for AI-driven applications using Python, Flask, and FastAPI, deploying machine learning models with TensorFlow and PyTorch for predictive analytics in a healthcare product.
- Created RESTful APIs to interface between the front-end and machine learning models, utilizing Swagger for API documentation and improving client-side consumption.
- Developed scalable forms for an admin system using Zod and React Hook Form, reducing development time by 30% and significantly improving data integrity.
- Led the development of creating a data-analytics platform including crafting a data-intensive dashboard containing visual charts and graphs using React, TypeScript, Tailwind CSS and data-visualization libraries including Highcharts and D3.js.
- Implemented Redux Toolkit for improved state management and TypeScript support, enhancing code quality by 50%.
- Integrated Python-based ETL pipelines with Azure Data Factory, automating the data collection and pre-processing workflows for machine learning model training.

Cognizant - Remote

2018.3 – 2020.8

Full Stack Engineer

- Developed full-stack web applications for finance clients using Java, Spring MVC, and Spring Boot, ensuring a secure, scalable, and maintainable architecture.
- Utilized React for building dynamic front-end features, using React Hooks for state management and Axios for making API calls to Java-based backend services.
- Built Angular components to facilitate seamless interactions with Java REST APIs, enabling real-time data processing and enhancing client-facing features.
- Integrated payment processing with Stripe using Java and C#, improving payment gateway reliability and reducing failure rates by 15%.
- Deployed applications on AWS using Elastic Beanstalk, S3, and RDS for seamless scaling and high availability.
- Implemented CI/CD pipelines with Jenkins for Java and C# projects, automating build, test, and deployment stages, and reducing time-to-market by 30%.
- Utilized Java libraries like Quartz for job scheduling and Log4j for logging, ensuring smooth production operations and improved debugging capabilities.
- Optimized database queries in PostgreSQL and SQL Server, using Entity Framework and LINQ in C# to enhance data retrieval speed by 25%.
- Migrated HTML/JavaScript/jQuery based applications to use a modern tech stack including React, Vue, Angular etc

Full Stack Engineer

- Assisted in the development of Java web applications using Servlets, JSP, and Spring Framework, building scalable applications for small-to-medium businesses.
- Developed backend services in C#, utilizing ASP.NET MVC and Entity Framework for data modeling, ensuring fast response times and data consistency.
- Worked on integrating RESTful APIs in Java to connect with external third-party services such as social media platforms and payment systems.
- Developed dynamic, interactive interfaces using AngularJS, ensuring compatibility with Java-based backend systems and a seamless user experience.
- Integrated NoSQL databases like MongoDB into Java applications to handle unstructured data and increase data retrieval efficiency.
- Contributed to optimizing legacy C# code, introducing caching mechanisms with Redis to reduce database load and improve application performance.
- Assisted in troubleshooting and debugging Java and C# applications, implementing solutions with JProfiler and Visual Studio Debugger.
- Implemented unit tests using JUnit (for Java) and MSTest (for C#), improving code quality and ensuring system reliability in production environments.

EDUCATION

Radford University | May 2012 – May 2016

Bachelor of Science - Computer Science
