LinkedIn: <https://www.linkedin.com/in/radhika-k-vemula/>

Full Stack Java Developer with 8+ years of experience in designing, developing, and deploying scalable applications. Proven ability to manage projects, lead cross-functional teams, and drive technical solutions that align with business objectives. Looking to leverage technical expertise, Agile methodology knowledge, and product management skills to transition into a Technical Project or Program Manager role.

- **Led a cross-functional team**, guiding them through the design and development of high-performing, scalable web applications, ensuring alignment with both **business requirements** and **technical specifications**.
- Drove the **product vision realization**, effectively translating functional and technical requirements into concrete features. Played a pivotal role in **backlog prioritization** and **Agile Sprint Planning**, ensuring that deliverables were completed on time and within scope.
- Led the **migration initiative** to modernize the UI codebase, overseeing the transition from **AngularJS 1.5 to Angular 11**. Successfully managed the segmentation of the UI project into **microservices modules**, enabling streamlined deployments and improving team velocity.
- Directed the design and development of **RESTful web services** using **Spring Boot**, ensuring the application architecture adhered to **microservice principles** and delivered a **robust error-handling mechanism**, which improved application stability and performance.
- **Coordinated with cross-functional teams**, including **Product Owners, Designers, and QA Engineers**, to ensure **end-to-end product delivery**, from prototyping to deployment.
- Spearheaded the adoption of **Node.js** and **LoopBack** for API development, enhancing the team's efficiency and reducing integration time.
- Orchestrated the **CI/CD pipeline integration** using **GitLab** and **Docker**, enabling efficient version control and smooth deployment cycles, while aligning with the team's need for high availability and scalability.
- **Made key technical decisions** in system design, including utilizing **AWS services** (S3, EC2, Lambda) to implement a **serverless architecture**, reducing infrastructure costs by 40% while improving application performance and scalability.
- Led the **integration with F5 load balancers**, ensuring system scalability and high availability across production environments.
- Guided the team in the design and implementation of **multi-tenancy architecture**, allowing seamless integration of backend services across multiple business units and data sources, ensuring data security and segregation.
- Managed the **deployment of microservices** using **Tomcat, JBoss, and AWS EC2**, while ensuring smooth operations through regular collaboration with the operations team for deployment monitoring and issue resolution.
- **Triage critical issues** and lead investigations into root causes, utilizing tools like **Kubernetes, CloudWatch, and AppDynamics** to proactively resolve incidents. Integrated **Grafana** to monitor and optimize performance, significantly reducing downtime and improving failover scenarios.
- Played an instrumental role in **coordinating change management** by preparing comprehensive change requests, including code deployments, database modifications, and server-side adjustments. Collaborated with cross-functional teams to ensure smooth rollouts across environments.
- Guided the **database team** in creating optimized queries and designing complex data structures for high-volume transactions, directly improving the system's overall performance.

Certifications:

- AWS Certified Developer - Associate
- Certified SAFe® 6 Product Owner/Product Manager

Work Experience:

Client: Wabtec Corporation - Fort Worth, Texas Roles: Technical Product Owner(POPM)	June 2022-Current
Job Responsibilities:	
Program Management & Agile Execution	
• Led cross-functional Agile teams within a Scaled Agile Framework (SAFe), driving program-level planning, roadmaps, and execution across multiple teams. • Facilitated Agile ceremonies (stand-ups, sprint planning, retrospectives) and ensured cross-team dependencies were managed effectively. • Developed and maintained a strategic program roadmap, aligning business priorities, engineering initiatives, and architectural goals. • Partnered with Product Owners and Engineering Leads to define program objectives, milestones, and deliverables, ensuring alignment with business goals. • Established Key Performance Indicators (KPIs) and Objectives & Key Results (OKRs) to measure program success, team performance, and product impact. • Managed Agile release trains, ensuring timely and high-quality feature deliveries across multiple teams and workstreams.	
Stakeholder Management & Business Alignment	
• Engaged with senior leadership, engineering teams, DevOps, security, and business stakeholders to drive program outcomes and technical implementation strategies. • Acted as the primary liaison between technical teams and business stakeholders, translating complex technical concepts into actionable insights, enhanced automation, creating reports, data processing improvements and reporting capabilities, ensuring alignment with business goals for executive leadership. • Defined and prioritized strategic initiatives, balancing business objectives, technical feasibility, and financial impact. • Managed program risks, dependencies, and escalations by proactively identifying roadblocks and implementing mitigation strategies. • Spearheaded cross-functional collaboration to drive cloud infrastructure adoption, microservices transformation, and DevOps best practices across the organization.	
Feature Development & Technical Program Oversight	
• Led end-to-end program execution for modernization initiatives, including legacy system refactoring, cloud migrations (AWS, Azure), and API-first architecture transformations. • Defined and governed feature development, release management, test data management and operational readiness, ensuring seamless delivery across multiple teams. • Managed localization and internationalization efforts, enabling the platform to support global business operations with multi-language and region-specific configurations.	

- Guided the development of **automated task workflows**, enabling efficient and **error-free scheduling** and **processing of data**, while ensuring **continuous improvements** through iterative **feedback loops** with both developers and business users.
- Oversaw **API design, microservices architecture, and data integrations**, ensuring **scalability, performance**, and security best practices.
- Developed program-level documentation, playbooks, and governance frameworks to streamline **processes, enhance visibility, and optimize delivery efficiency**.
- Collaborated with cross-functional teams to integrate the **automated testing framework** into the CI/CD pipeline, ensuring automated verification of each code change to maintain the integrity and reliability of **scheduled task processes** in the application.
- Spearheaded the adoption of **advanced data access tools**, facilitating **seamless integration** with various **data sources** and ensuring accurate, **real-time data retrieval** for **task scheduling** and workflow management across the application.

Technical Program Leadership & Architecture Oversight

- Oversaw **API design, microservices architecture, and data flow**, ensuring **system compatibility, performance efficiency, and scalability** across multiple teams.
- Collaborated with **QA and DevOps teams** to optimize **CI/CD pipelines, automated testing strategies, and deployment processes**, accelerating time-to-market.
- Oversaw the generation and management of **high-quality test data, data generation**, working with development and QA teams to create synthetic data sets that accurately reflect real-world scenarios, thereby improving test coverage and reducing time spent on manual testing.
- Directed the **System Verification process** to ensure that the Task Management Application met **critical system performance and functionality requirements**, including the validation of automated workflows and data processing tasks, ensuring the system's reliability in handling large volumes of data.

Risk & Quality Management

- **Managed technical debt** by integrating **refactoring, security enhancements, and infrastructure upgrades** into the backlog, aligning with business and engineering priorities.
- Partnered with QA teams and engineers to **prioritize and resolve defects**, achieving a **30% backlog reduction** through strategic issue resolution.
- Focused on risk reduction by leveraging the **automation framework** to conduct **end-to-end testing** of the task management and **data processing workflows**, ensuring high-quality delivery and identifying potential bottlenecks in the **workflow automation** early in the development cycle.
- Led **observability and monitoring improvements**, enhancing **system reliability, proactive issue detection, and minimizing downtime**.
- **Implemented automated testing frameworks and quality assurance processes**, improving release stability and **reducing regression issues**.
- Drove **security best practices**, ensuring compliance with **industry standards, cloud security frameworks, and internal company policies**.

Key Achievements & Impact

- **Led microservices adoption**, improving system **scalability and maintainability by 40%** through modular architecture.
- **Spearheaded AWS migration**, achieving a **35% reduction in infrastructure costs** while enhancing **cloud-native adoption and operational efficiency**.

- **Directed AngularJS to Angular 11 migration**, boosting **frontend performance by 20%** and improving user experience.
- Designed and implemented a **multi-tenant architecture**, increasing **security, flexibility, and configurability** for multiple business units.
- Led product strategy sessions to align development efforts with business goals, ensuring that **task automation, data management, and reporting** features met user expectations and provided operational efficiency for end users.

Tech stack: Agile/Scrum Processes, Microservices Architecture, Java, J2EE, Polymer, Angular 1.5/9/11, Spring Boot, Node.js, TypeScript, AWS (EC2, S3, Lambda, SNS, SQS, cloudwatch), GitLab CI/CD, Docker, PostgreSQL, Kubernetes, UI/UX Prototyping (Figma), Confluence, Rally, Lucid chart, Database (SQL, JPA, Query Optimization).

Client: Wabtec Corporation - Fort Worth, Texas
Roles: Full Stack Developer

July 2020-May 2022

Job Responsibilities:

- Designed and developed complex end-to-end web applications using Java/J2EE architecture, ensuring high-performing, scalable solutions.
- Provided technical mentorship to junior developers, promoting best practices in coding, design, and testing.
- Led the migration from monolithic to microservices architecture, enhancing system performance and scalability.
- Developed and implemented multi-tenancy architecture, ensuring seamless backend service integration across multiple business units.
- Enhanced frontend application in terms of performance and UI/UX experience using Angular 11.
- Contributed to backend & frontend development using Java, Spring Boot, Angular, TypeScript, and Node.js, driving the creation of key features such as CRUD operations and API integrations.
- Assisted in UI/UX prototyping, designing wireframes in Figma and converting them into fully functional Angular-based interfaces.
- Worked closely with the Database team, optimizing complex queries, designing database tables, and improving system latency.
- Integrated AWS services (EC2, S3, SNS, SQS, Lambda) to enhance application scalability and reduce operational costs.
- Designed and implemented Cron-job scheduling for automating routine tasks and improving system efficiency.

Code Quality & Deployment

- Conducted code reviews, ensuring adherence to best coding standards and unit testing practices.
- Release Management: Managed CI/CD pipelines using GitLab, ensuring smooth production deployments and seamless code migration.
- Defect Resolution: Collaborated with QA teams to proactively address defects and optimize application performance.

Cross-Functional Collaboration

- Acted as a liaison between business users, QA teams, and product owners, ensuring technical requirements align with business goals.
- Provided technical expertise in defining project scope and overcoming business challenges.

- Engaged in cross-functional collaboration to translate business and technical requirements into actionable solutions, improving project execution efficiency.

Tech stack: Agile/Scrum Processes, Microservices Architecture, Java, J2EE, Polymer, Angular 1.5/9/11, Spring Boot, Node.js, TypeScript, AWS (EC2, S3, Lambda, SNS, SQS, cloudwatch), GitLab CI/CD, Docker, PostgreSQL, Kubernetes, UI/UX Prototyping (Figma), Confluence, Rally, Lucid chart, Database (SQL, JPA, Query Optimization).

Client: GE Transportation, a Wabtec Company, Fort Worth, TX
Role: Full Stack Developer

March, 2019 – June, 2020

Job Responsibilities:

- **Agile Planning & Requirements Management:** Facilitate Agile planning sessions and lead requirements management based on defined Use Cases to replace existing legacy applications. Demonstrated leadership in aligning project goals with business requirements.
- **Product Owner Collaboration:** Collaborate closely with Product Owners to gather and refine detailed functional and technical specifications, driving the development of high-performing, scalable, and innovative end-to-end web applications.
- **Front-End Development & Design:** Translate mockups and business requirements into fully functioning front-end interfaces using modern libraries like Angular. Propose and implement robust UI frameworks to enhance user experience.
- **Technical Expertise in Front-End:** Develop user-centric UI screens using Angular 11, TypeScript, HTML, Bootstrap, and SCSS. Design and build complex components that address business needs and ensure scalability.
- **Testing & Documentation Leadership:** Oversee testing, create Swagger documentation, and manage the implementation and maintenance of business processes. Ensure all technical and functional support tasks align with company policies and requirements.
- **Backend Collaboration:** Coordinate with backend teams to develop reliable services for file conversion and data retrieval, enhancing UI functionality.
- **Quality Control & Code Review:** Lead code reviews for quality assurance, ensuring all deliverables meet coding standards. Mentor and guide team members to achieve on-time delivery of project commitments.
- **Version Control & Deployment:** Create and review GitLab pull requests, ensuring all unit tests pass and acceptance criteria are met before merging. Manage the migration of code from lower environments to production.
- **Defect Analysis & Resolution:** Proactively analyze and resolve defects identified by QA and Product Owners. Work closely with QA teams to close out all open defects efficiently.
- **Enhancements & Major Implementations:** Drive enhancements and major functionality implementations across UI and backend systems, demonstrating both technical and project leadership.

Leadership and Project Management:

- Facilitated cross-team collaboration, driving efficient integration between front-end and backend teams.
- Actively participated in war room meetings, contributing to quick resolution of production issues and cross-functional problem-solving.
- Championed CI/CD best practices using Jenkins, improving deployment frequency and code quality.
- Provided leadership in defect resolution, ensuring long-term system stability and operational success.

Key Achievements:

- Successfully replaced legacy applications with high-performing, scalable web applications, improving user experience and operational efficiency.
- Delivered complex UI components under tight deadlines, adhering to acceptance criteria and passing rigorous QA testing.
- Reduced defect rates by 30% through consistent code reviews and collaboration with QA teams.
- Spearheaded seamless production migrations without downtime, ensuring robust and reliable application releases.
- Contributed to the growth of team knowledge by mentoring junior developers and sharing best practices for Angular development.

Tech stack: Agile/Scrum Processes, Microservices Architecture, Java, J2EE, Polymer, Angular 1.5/9/11, Spring Boot, Node.js, TypeScript, AWS (EC2, S3, Lambda, SNS, SQS, cloudwatch), GitLab CI/CD, Docker, Kubernetes, UI/UX Prototyping (Figma), Database Design (SQL, JPA, Query Optimization).

Client: Dicks Sporting Goods, Pittsburgh, USA

Jan,2018 – Mar,2019

Role: Java Developer

Job Responsibilities:

- **Agile Environment & SDLC:** Worked in an Agile environment following a two-week sprint process and SDLC methodologies to maintain and enhance the MOVE 2.0 application.
- **Requirement Gathering & Feature Development:** Collaborated with the product team to gather business requirements and implement new features.
- **Application Development (MVC & Microservices):** Developed applications using the Model-View-Controller (MVC) framework, adhering to microservices architecture principles.
- **Backend Development:** Consumed and created RESTful web services using core Java/J2EE technologies and Spring framework, integrating with SQL Server.
- **Cross-Platform Collaboration:** Worked with iOS and Android teams to build and modify web services, ensuring seamless integration across platforms.
- **Database Performance Optimization:** Partnered with the database team for performance tuning, adding indexes, and optimizing queries.
- **Load Balancing & Server-Side Issue Resolution:** Collaborated with the application team to manage F5 load balancing and resolve server-side issues.
- **Messaging Systems & Monitoring:** Gained experience with ActiveMQ and Java messaging systems, leading the implementation of failover settings and monitoring daily workflows.
- **Deployment & Server Management:** Deployed application modules into JBoss Server 7 using the management console.
- **Change Request Management:** Handled change requests for server, database, and application-side implementations.
- **Configuration & Version Control:** Utilized SQL Server and Gradle for configuration management and development. Worked with IntelliJ IDE and Git for version control.
- **DevOps & CI/CD:** Leveraged Jenkins for continuous integration, SonarQube, and Nexus for code quality, and JIRA for issue tracking.
- **Business Rules Implementation:** Defined business rules using Drools Rules Engine BRMS to automate decision-making processes.
- **Root Cause Analysis & Issue Resolution:** Investigated and resolved customer and server-side issues.
- **Application Monitoring:** Utilized AppDynamics to track application performance, identifying and resolving errors and database failures.
- **Team Leadership & Monitoring:** Led offshore teams in supporting and monitoring applications using Grafana and AppDynamics.
- **Security Implementation:** Developed encryption and decryption mechanisms for secure service exposure.
- **Job Scheduling:** Created a cron-job scheduler to process millions of records quickly as part of ongoing enhancements.

- **Documentation & Problem Solving:** Authored Swagger documentation and led war room meetings to resolve critical production issues.

Leadership and Project Management:

- **Offshore Team Leadership:** Directed offshore teams to ensure smooth application monitoring and support, integrating live data monitoring tools.
- **Cross-Team Coordination:** Coordinated with cross-functional teams, including mobile development, database, and infrastructure teams to ensure alignment and successful project delivery.
- **Production Issue Resolution:** Led war room meetings to triage and resolve production issues, ensuring minimal downtime and efficient problem resolution.
- **Change Management:** Oversaw change requests and deployments, mitigating risks and ensuring consistent application performance.
- **Monitoring & Reporting:** Managed daily monitoring and reporting of application health, contributing to proactive problem-solving and long-term stability.
- **Technical Mentorship:** Guided junior developers and offshore teams, promoting best practices in application development, deployment, and performance monitoring.

Key Achievements:

- **System Performance Optimization:** Improved database query performance by 30% through effective tuning and indexing, reducing latency and enhancing overall application responsiveness.
- **Microservices Migration Success:** Spearheaded the migration of key services from monolithic architecture to microservices, resulting in a 40% increase in scalability and system flexibility.
- **Cross-Platform Service Integration:** Successfully built web services compatible with both iOS and Android platforms, streamlining development and reducing operational bottlenecks.
- **Operational Efficiency:** Automated routine tasks using cron-jobs, reducing manual intervention by 50% and ensuring timely completion of critical processes.
- **Security Enhancement:** Implemented robust encryption and decryption mechanisms, significantly improving data security and compliance.
- **Monitoring Improvements:** Integrated AppDynamics and Grafana for real-time performance monitoring, leading to a 25% reduction in production incidents.
- **Leadership Impact:** Led offshore teams to monitor and resolve system issues, contributing to a 20% improvement in system uptime and reliability.
- **CI/CD Pipeline Optimization:** Enhanced Jenkins pipelines, reducing deployment time by 35% and ensuring smoother, faster application releases.
- **Quality Improvements:** Conducted rigorous code reviews, reducing defect rates by 30% and significantly improving code quality across the application lifecycle.

Techstack: Java8, Spring MVC, Spring Data JPA, SQL Server, Gradle, ActiveMQ, F5 load balancer, IntelliJ IDE, JBOSS management console, Docker, Linux servers, Jenkins, SonarQube, Sonarlint, Drools Rules engine, AppDynamics, Grafana,swagger.

Client: Principal Financial Group
Role: Java Developer

Jan,2017- Dec,2017

Job Responsibilities:

- Experience working in Agile environments following the SCRUM process to ensure iterative development and timely delivery.
- Proficient in backend development with **Java 8**, leveraging core **Java/J2EE technologies** for enterprise applications.
- Hands-on experience with **jQuery** and **JavaScript** to implement dynamic UI components and client-side validations.
- Implemented backend functionality using **Spring MVC** within a **microservices architecture** to enhance scalability and modularity.
- Built responsive and interactive front-end applications using **ReactJS** and **Redux** to develop Single Page Applications (SPA).
- Developed and deployed **Spring Boot** applications on **AWS EC2** instances, ensuring cloud-based scalability.
- Integrated **REST APIs** and message-driven architecture through **Apache Kafka** for asynchronous communication between services.
- Utilized **Maven** as a build automation tool to generate **WAR/JAR** files for deployment on application servers.
- Conducted behavior-driven development (BDD) testing using **Cucumber** and unit testing with **JUnit** and **Mockito**.
- Deployed applications and managed configurations in **WebLogic Application Server**, handling multiple data sources and messaging.
- Applied **Jenkins** for Continuous Integration/Continuous Deployment and managed source control with **Git**.

Key Highlights:

- **Agile & Scrum** – Experience in Agile methodologies with active participation in the SCRUM process for iterative development.
- **Backend Development** – Proficient in **Java 8** and **J2EE technologies** for enterprise-level backend development.
- **Frontend Development** – Skilled in **JavaScript**, **jQuery**, and **ReactJS Redux** for dynamic, responsive UI and Single Page Applications (SPA).
- **Spring Framework** – Hands-on experience with **Spring MVC** and **Spring Boot** for developing microservices-based architectures.
- **Cloud Deployment** – Deployed Spring Boot applications on **AWS EC2** instances for cloud scalability.
- **REST & Messaging** – Integrated REST APIs and utilized **Apache Kafka** for asynchronous messaging between microservices.
- **Build & Deployment** – Built and packaged applications using **Maven**, deployed in **WebLogic Application Server** with multiple data sources.
- **Testing** – Experience with **Cucumber (BDD framework)**, **JUnit**, and **Mockito** for unit and integration testing.
- **CI/CD & Version Control** – Implemented continuous integration and deployment using **Jenkins** and managed version control through **Git**.

Tech stack: Methodologies: Agile, Scrum, Java 8, JavaScript, ReactJS, Redux, jQuery, Java (Core Java, J2EE), Spring MVC, Spring Boot, Spring Framework (Spring Boot, Spring MVC), Apache Kafka, JUnit, Mockito, Cucumber (BDD), Maven, Git, Jenkins, AWS (EC2), WebLogic, Microservices, RESTful APIs.
